EXTERNAL

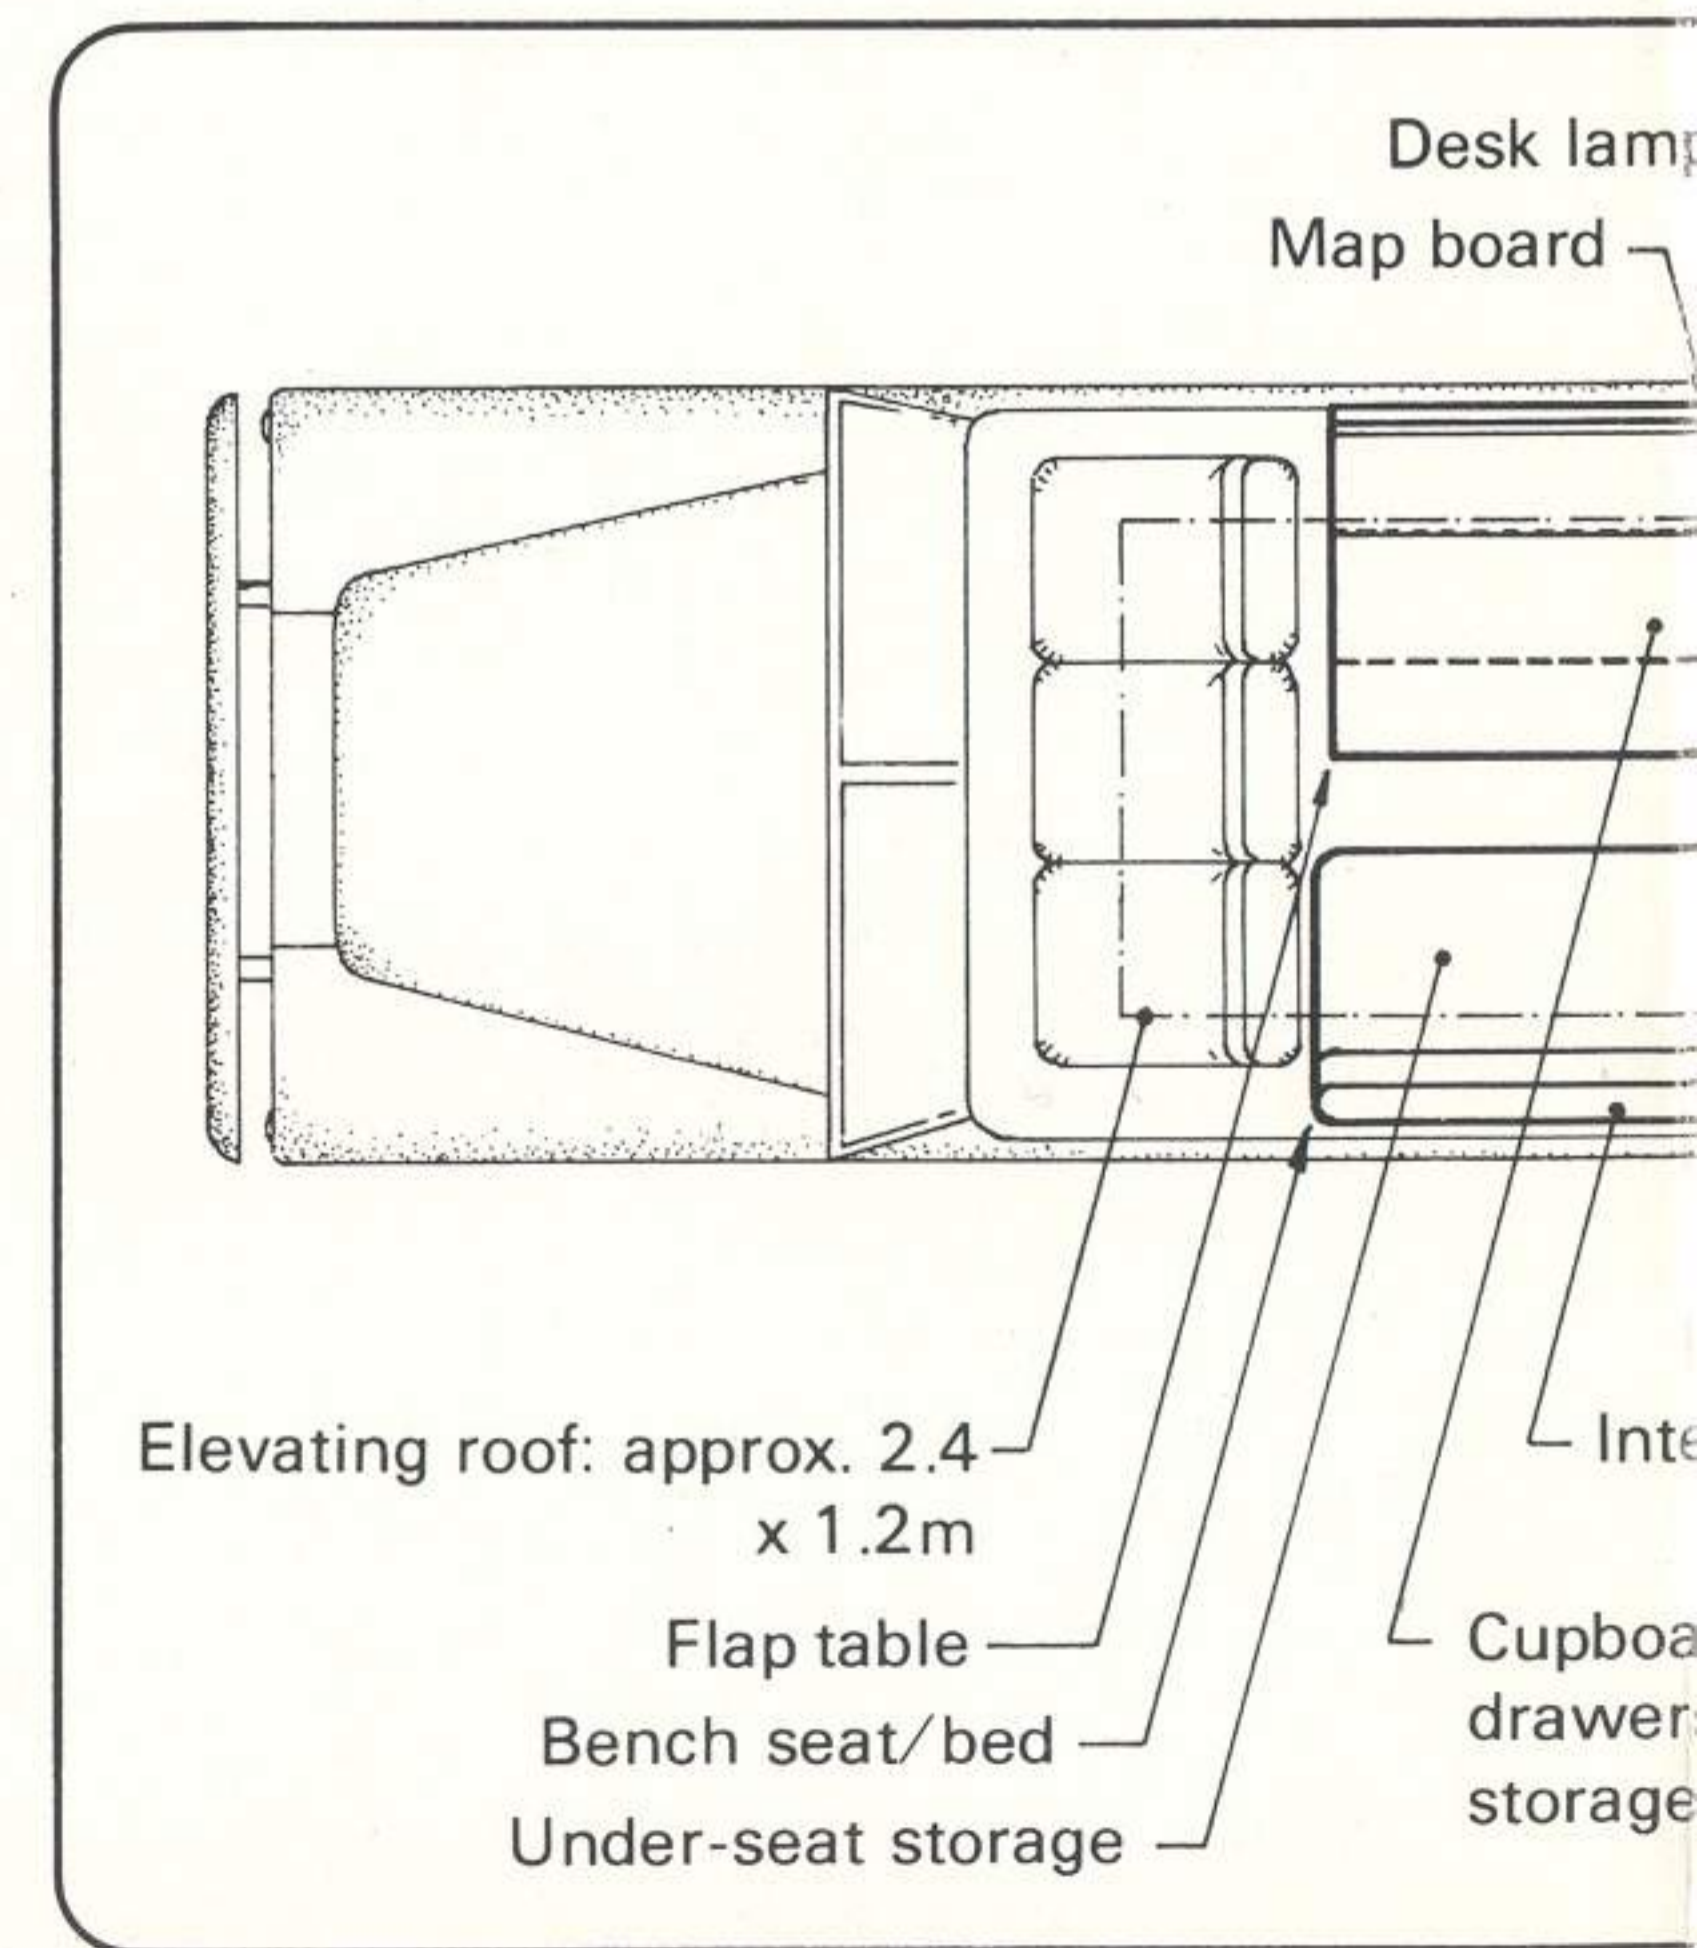

The easily erected elevating roof provides a standing headroom of about 1.9m over an area of approximately 2.4m x 1.2m. A roof rack is fitted over the cab, providing storage for camouflage nets and other supplies.

INTERNAL

Along one side of the interior a fitted cabinet provides a working area for up to three people and is complete with cupboards and drawers, a vertical

map board (1.8m x 0.5m) and a large flap-down table. The easy-clean plastic faced working surface of the cabinet conceals a stainless steel sink and a faucet and foot operated pump provides the water supply.

On the other side is a cushioned bench seat and backrest which easily converts to a 1.9m x 0.9m bed. A wardrobe provides hanging space for clothing and lockers are provided for stowage of water cans, bedding and other supplies. Roller blinds and curtains ensure that the interior can be 'blacked out' quickly.

COMMUNICATIONS

Radio communication and telephone equipment can be fitted into the vehicle or, alternatively, can be 'remoted' into the vehicle from an outside source.

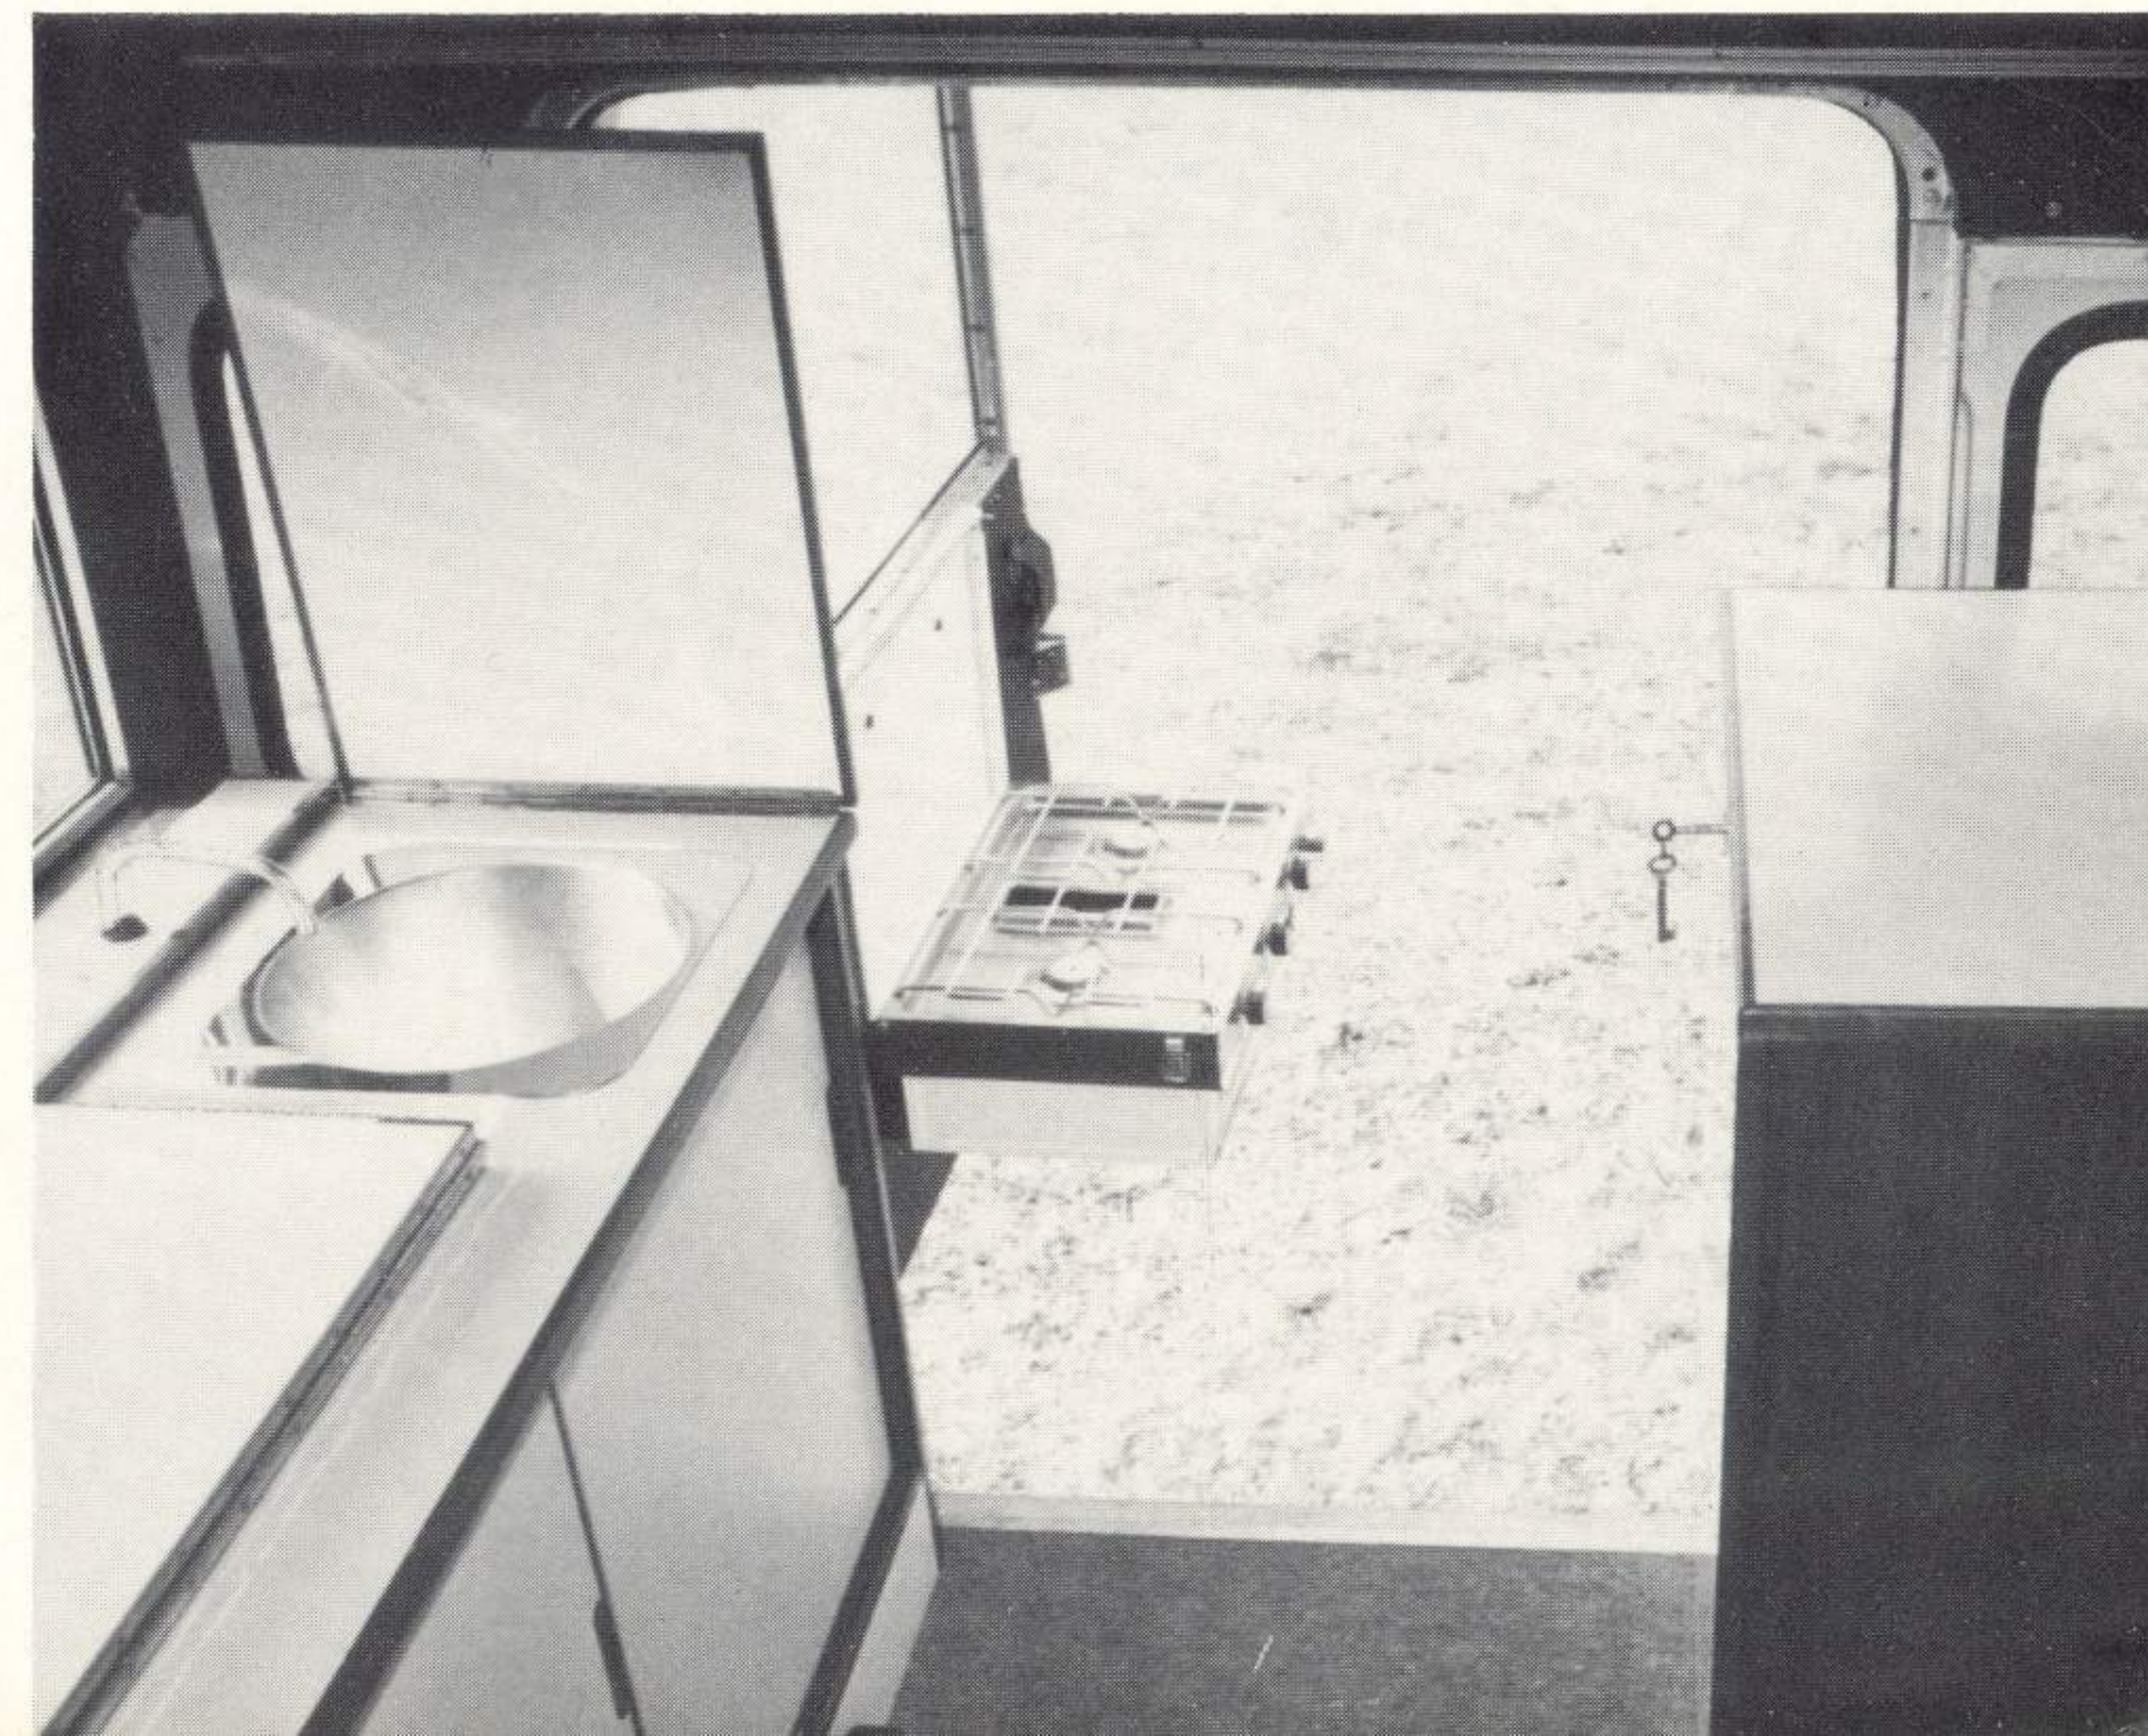

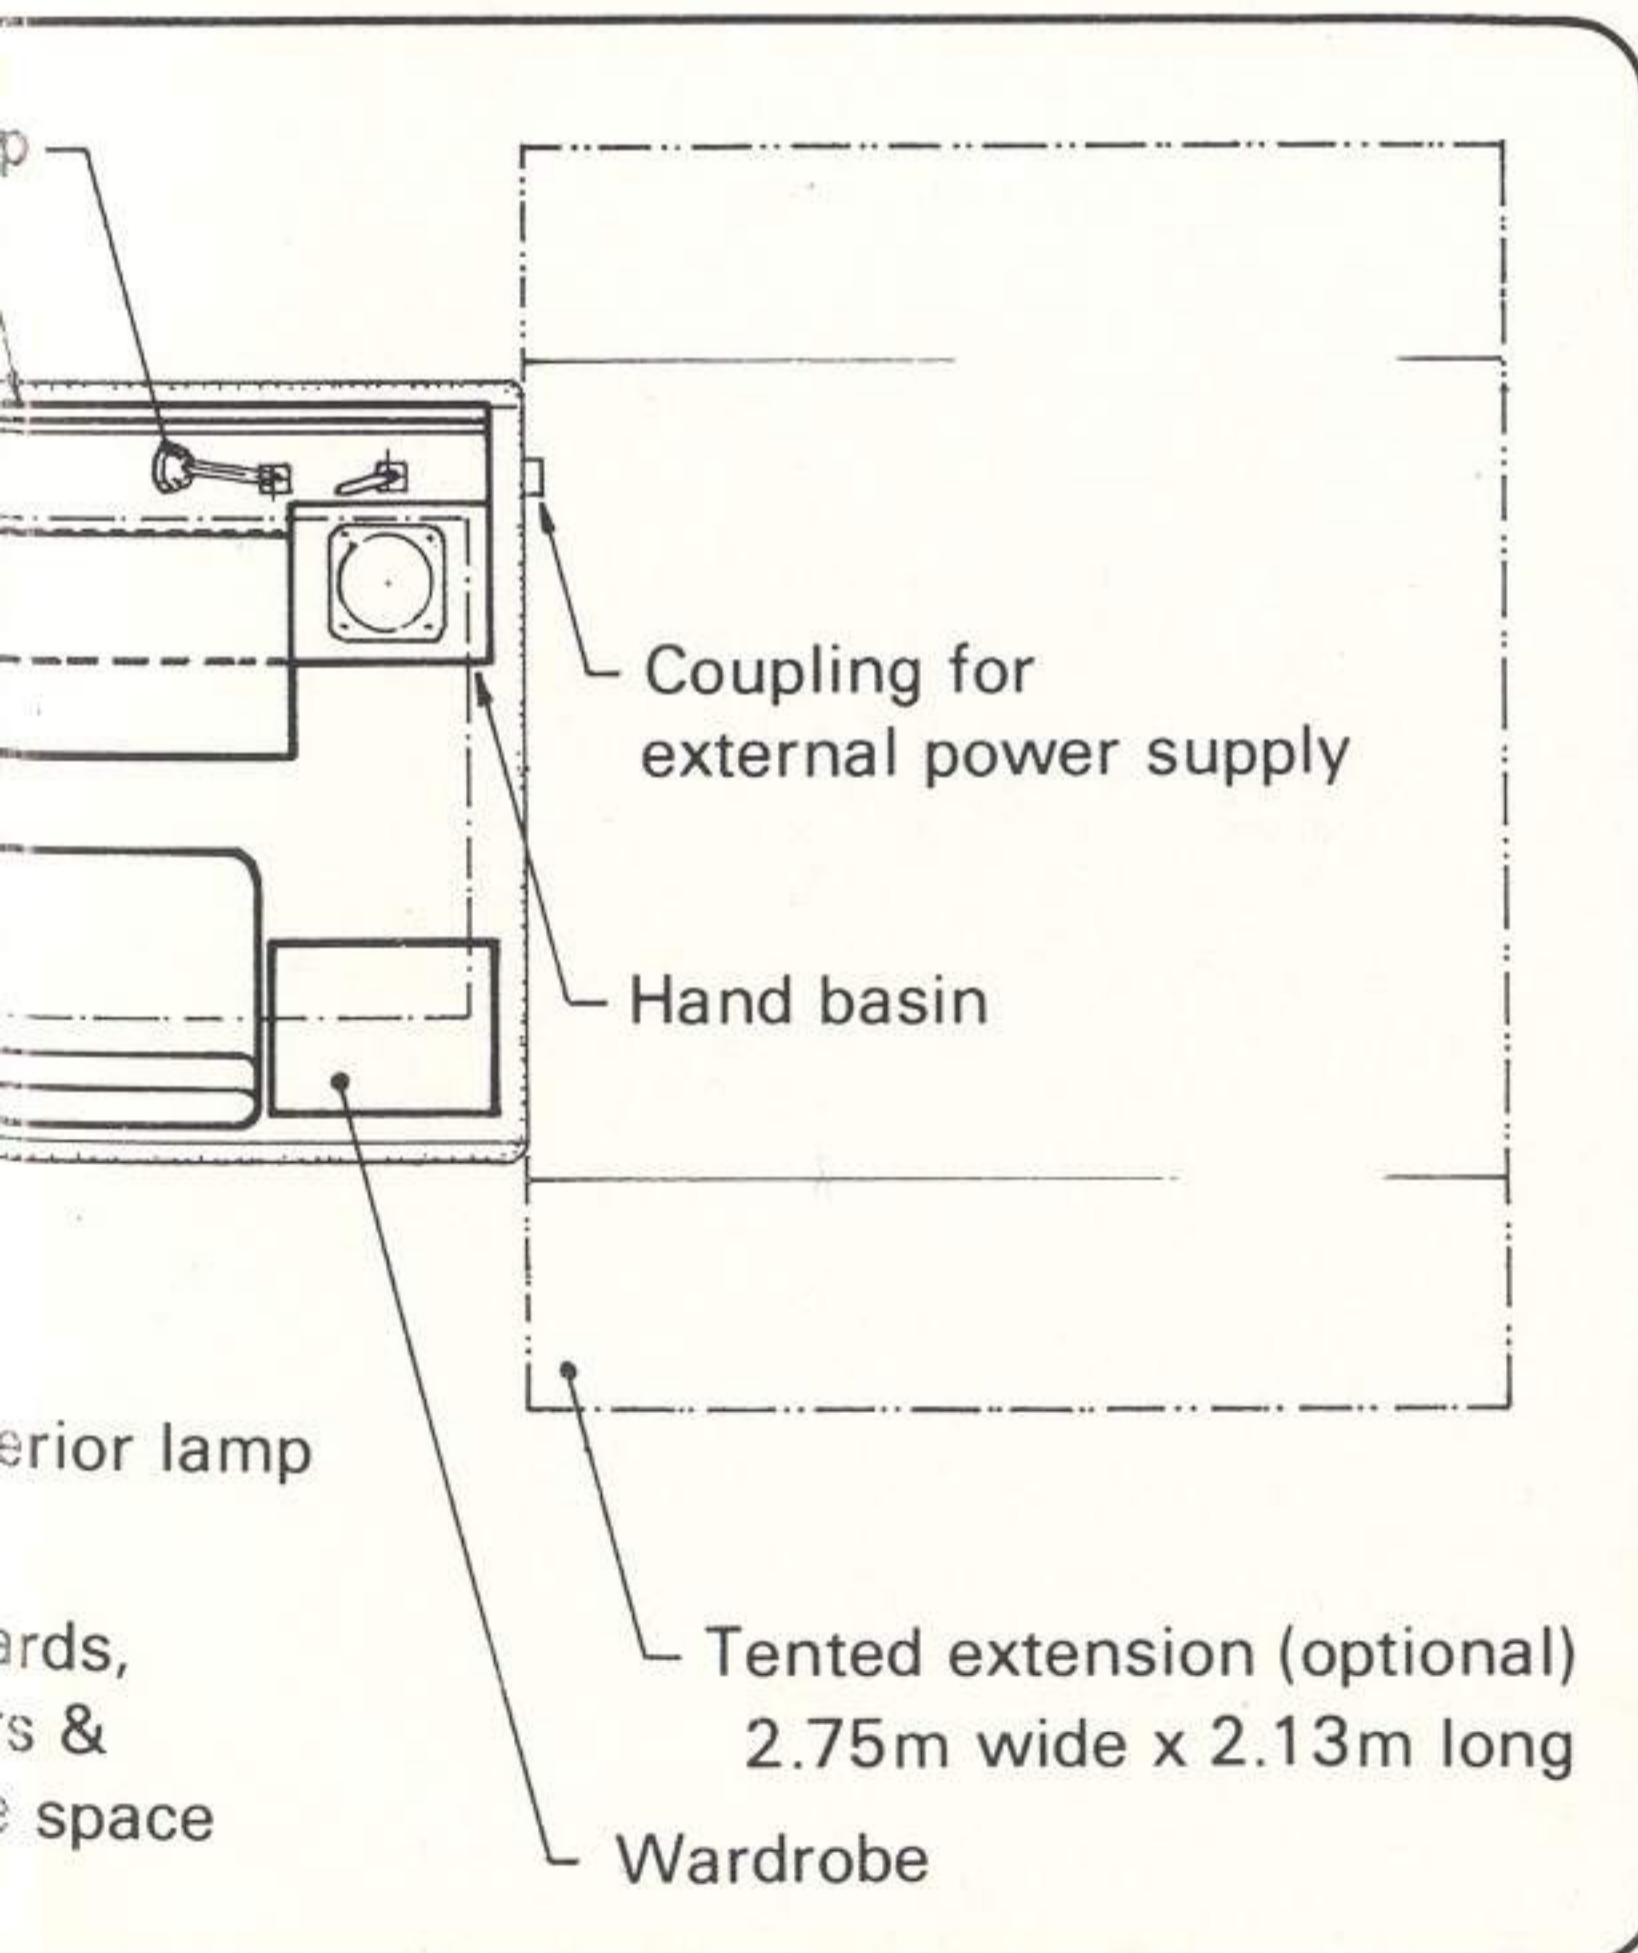

ELECTRICAL

The standard vehicle electrics are 12volt but provision is made for connexion of an outside mains electrical supply, providing 210-250v AC current and a 24v DC supply. Automatic 'black-out' switches are fitted to all doors. Interior lighting is provided from both the vehicle and the external supply.

OPTIONAL EQUIPMENT

According to customer requirements the vehicle may be fitted with air conditioning, heating, fans, a refrigerator and a gas cooker. Additionally, extra sleeping accommodation can be supplied as bunks within the vehicle, or outside — in the optional tented extension.

Carawagon can also produce Land Rover and Range Rover based conversions to meet your specialised requirements such as workshop, signals or fire control vehicles; or for medical, welfare or photographic use.
